Diploma in Implant Dentistry
The FGDP(UK) offers a two-year Diploma in Implant Dentistry that could prove to be the best investment you ever make. An internationally renowned team, using state-of-the-art facilities and training methodologies, runs our course.

The FGDP(UK)'s Diploma in Implant Dentistry is a part-time course, specifically structured for the busy practitioner. Designed to emphasise the theory behind the procedure, as well as to teach new techniques, candidates will gain the necessary knowledge and skills to practise modern implant dentistry. The Diploma is rigorous and challenging, but that is what gives the course its deep and long-lasting value. It will give you an opportunity to broaden your services in a way that suits you, your practice and your patients.
Course Content
The course is comprehensively evidence-based, practically taught and assessed. There are 11 units, all of which include a practical session. We aim to teach the theory behind the techniques as well as ensuring that you are able to perform key dental procedures. We cover comprehensive training standards, both simple and complex, including the IRMER training standards in CBCT. The course covers all of the GDC’s core CPD requirements. Each unit concludes on a Saturday so that the busy practitioner will spend less time away from their patients.

Teaching Methods
The Diploma consists of a number of components, including self-directed distance learning (30 credits), contact learning (45 credits) and completion of the clinical component (45 credits).

To help, you will be assigned a UK-based tutor and a tutor group of 5 to 6 participants. All of our tutors have previously completed the Diploma and therefore know the difficulties you will face first-hand. You can contact your tutor directly to organise observation of surgical procedures, or to seek assistance when completing 4 clinical cases (6 if sitting for the Advanced Certificate). Tutor assistance is available for up to two years after the teaching element of the Diploma is completed.

Course Topics
- Scientific and didactic content
- Documentation and record keeping
- Patient assessment and treatment planning
- Surgery - soft tissue management, hard tissue management, bone expansion, ridge expansion and sinus floor lifts
- Asepsis theory and practice
- Timescales
- Augmentation
- Interdisciplinary Treatment
- Restorative Phases
- Provisional restorations
- Fixed Restorations
- Removable Prosthesis

Completion of the Diploma can also count towards progression onto the MSc programmes at Edge Hill University and University Rey Juan Carlos, Madrid.
